Title: Experienced Software Engineer (Needed to Save the Planet) -- U113

Compensation: Competitive salary and benefits

Location: Los Altos, California

Company description:

LCG Consulting is an R&D organization active in the energy sector. Situated at the center of Silicon Valley, LCG has a rich history of cutting edge model development to support our growing user base in the area of competitive analysis of power markets. Our models are used for many purposes including improving power plant efficiency and directing massive energy sector investments. Our world-wide client base includes policy makers, large financial institutions and global energy companies and utilities.

Job description:

LCG has an immediate opening for a highly motivated software engineer. The successful candidate should be knowledgeable about software development practices and application maintenance.

The successful candidate will be enveloped in Microsoft .NET development projects which include design, implementation, testing and maintenance; and which provide value to the company, the client base and society. This candidate will need to work collaboratively with clients, team members, and consultants to understand domain and achieve desired results.

 Desirable qualifications:

- Background in software development methodologies and design principles.
- Proficiency with .NET framework, C# and SQL Server databases.
- Interpersonal skills and ability to work well within a team environment.
- Superior troubleshooting and analysis / resolution skills.
- Written and verbal communication skills for client support.
- Inquisitive and motivated.
- Independent working ability.
- Experience in F# a plus.

Send resume along with a cover letter indicating job title, earliest availability and expected salary range to info@energyonline.com. Additional information about LCG is available at our web-site www.energyonline.com. Local residents are preferred.
